ELECTRONIC CASH REGISTER

## Abstract:

**PURPOSE:** To improve workability and operability by providing a means which converts the amount of change into currency units of plural countries on the basis of the stored foreign exchange rate, and selects whether the amount of change is to be paid in cash or to be paid by converting it into plural information media.

**CONSTITUTION:** A ROM 13 to store fixed data such as a program, etc., and a RAM 14 to store the amount sold or the sold number of various kinds of commodities inputted by a key operation are connected to a CPU 11, and a foreign exchange rate storage part to store the foreign exchange rate between the respective countries is provided in the RAM 14. In this case, a currency converting means to convert the amount of change into the currency units of plural countries on the basis of the foreign exchange rate stored in the foreign exchange rate storage part to store the foreign exchange rate between the respective countries is provided, and simultaneously, an amount of change paying method selecting means to select whether the returned change is to be paid in cash or to be paid after converting it into plural information media other than the cash is provided. Thus, the device of the high value of existence in the country where plural kinds of currency are prevailing can be offered.
